

Atlas Polar
Quality
Edge

Everything you're looking for and a whole lot more.

Wireless convenience, high end precision, total versatility and amazing response times make Polar Remote Control Systems the preferred choice in a wide range of industrial applications.

Atlas Polar

IT'S ALL ABOUT QUALITY™

www.atlaspolar.com

Polar Remote Control Systems will free you from multi-conductor cables and tether lines, and connect to a large number of receiver models, including our own. And that's just for starters.

Interference Is A Non Issue

Polar Remote Systems operate on a 'spread spectrum' technology, designed to maintain communications links, even in the noisiest of environments. This means that you can operate multiple radios in the same vicinity without fear of interference or signal disruptions of any kind.

A Football Field And Then Some

Polar Remote Systems have a transmission range of up to 400 feet, which assures you of a strong transmission signal in the line of sight for a very long distance.

Power When You Need It, Which Is Always

Polar Remote Systems are powered by Nickel Metal Hydride (NiMH) rechargeable batteries, which offer long term cost savings and environmental friendliness, compared to disposable batteries. Batteries take only 3 hours to charge (via DC or AC adapter) and maintain their charge very well in the cold too. And when it's wet, you'll appreciate the Polar Remote's waterproof housing.

Handles Like A Dream

Polar Remote systems move from analog to digital resolution by means of a smooth output for controlling proportional valve. And with a transmission interval of 15 milliseconds, your Polar Remote gives you the closest thing to total one-to-one control.

Polar Remote Systems offer full duplex communication, which means that the transmitter can display all information monitored by the receiver.

Safety First

All Polar Remote Modules execute a self-check when they are powered up. They have LEDs to indicate the controller state and will flash error codes if either the inputs or outputs are in error.

Made Here To Work Here

Polar Remote Systems are made in North America and have been since 1974. So you can count on the quality.
